

# Micro-Profiles Redesign

## User Story:

As a traveler, I want to easily and quickly find the most compatible micro-profiles within host search results, so that I am more likely to send couch requests to compatible hosts.

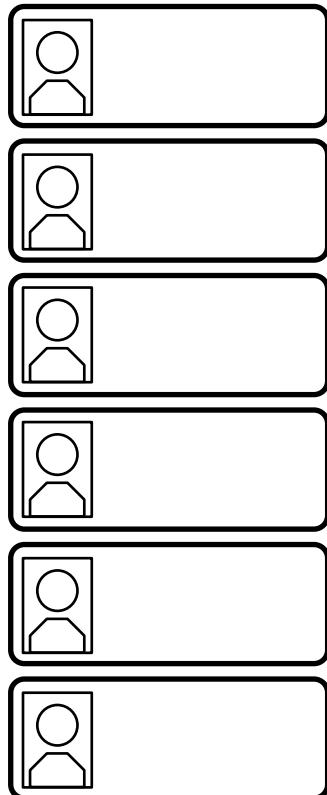

## UX Goal:

Travelers must be able to vertically scan the list of micro-profiles and ignore incompatible options. Information must be grouped into vectors of compatibility.

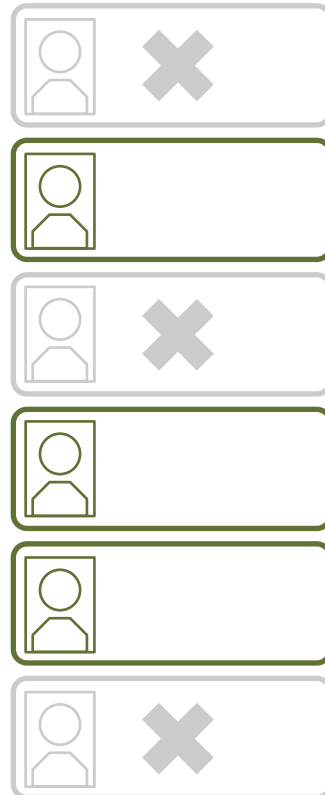

## Quantitative Goal:

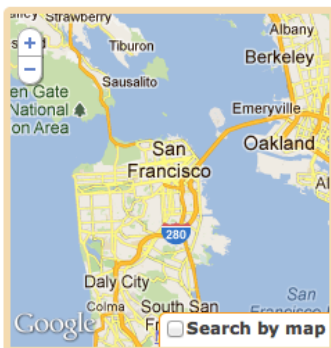

Increased number of accepted couch requests (ACRs) due to requests being sent to more compatible members.

**So many choices!  
Who should I  
read more about?**

**I want help to  
quickly eliminate  
some options**

#### I'm looking for...

- ☐ Hosts with an available couch
- ☐ Surfers looking for a couch **NEW**
- ☐ Nearby travelers
- ☒ Locals

# **Research on Vectors of Compatibility:**

In order of importance to travelers:

- 1. Availability** – How likely is the host to respond?
  - This is what matters most to travelers, even though they may not know it
  - This is measurable & objective information
  - Current micro-profiles don't reveal this info.
  
- 2. Identity** – Appearance (Photo), gender, age
  - Interviewed travelers say this is the #1 most important vector
  - This is subjective information
  - Members use this to make a quick gut choices
  
- 3. Reputation** – Does this host seem safe enough?
  - Each travelers has a different threshold for what the consider "safe enough"
  - This is both objective & subjective information
  - But, travelers make a quick pass or fail evaluation
  
- 4. Personality** – What do I have in common with this host?
  - Though least important, it's still a very important vector for travelers' decision making
  - Entirely subjective information
  - Requires time to read, study, and evaluate

## **UX Goals in Detail:**

### **1. Availability**

- The default sort of search results should be more accurately based on availability, and the sort label should explain that sort is based on availability
- This info should be easy to find & scan through

### **2. Identity**

- Add multiple photos to micro-profile
- Make all photos larger
- Age & gender should be easy to find & scan through

### **3. Reputation**

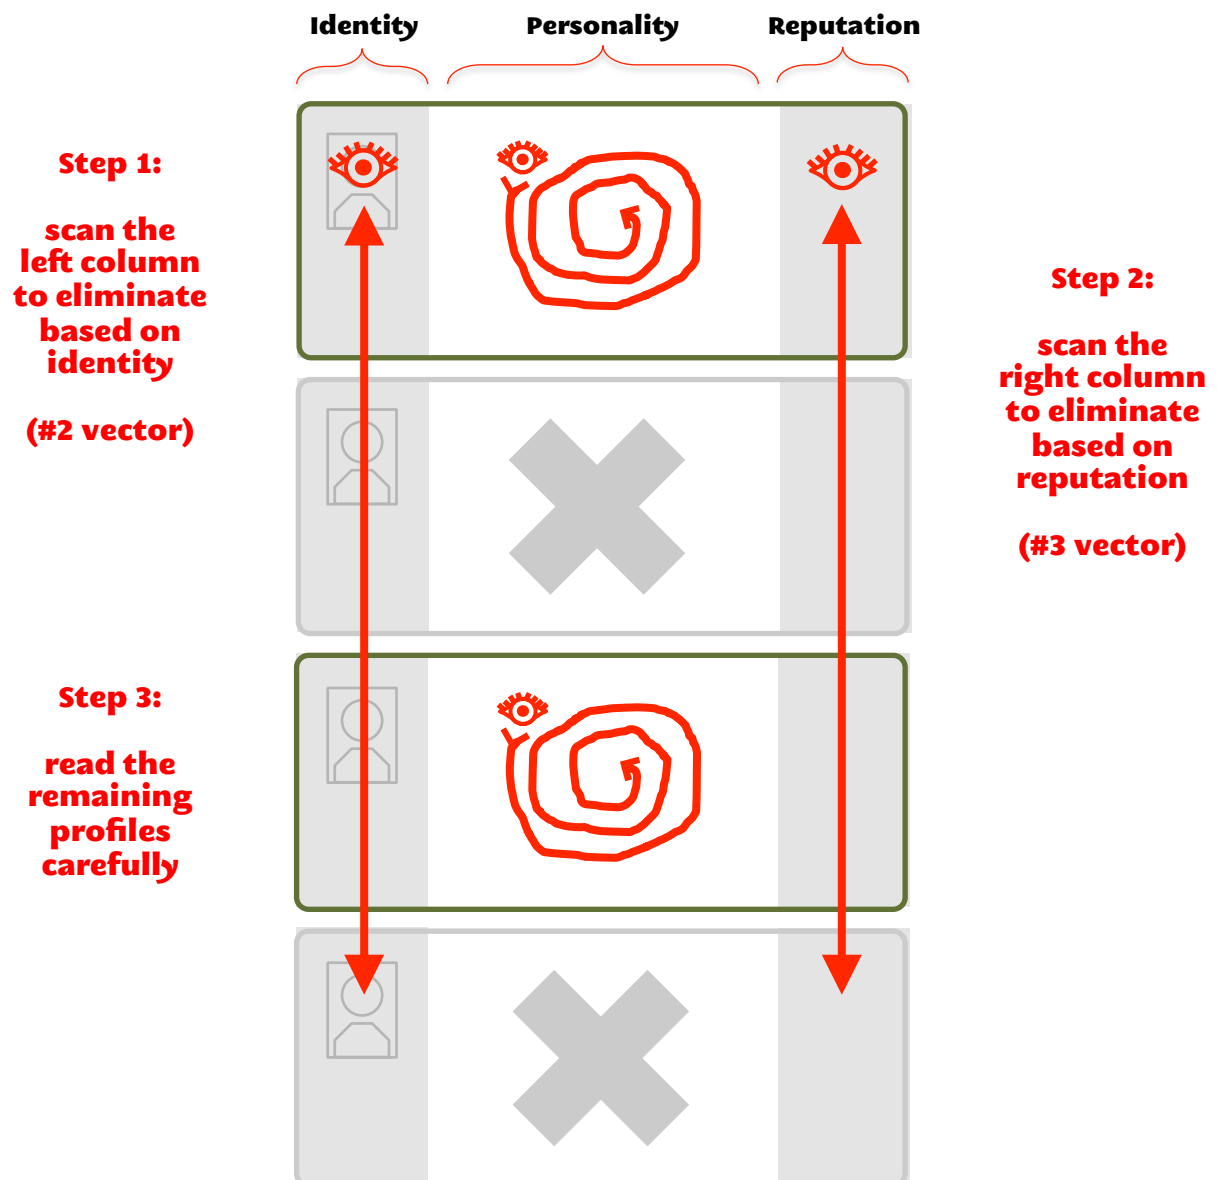

- Separate objective & subjective info. Simplify.
- Allow surfers to mentally calculate & compare
- This info should be easy to find & scan through

### **4. Personality**

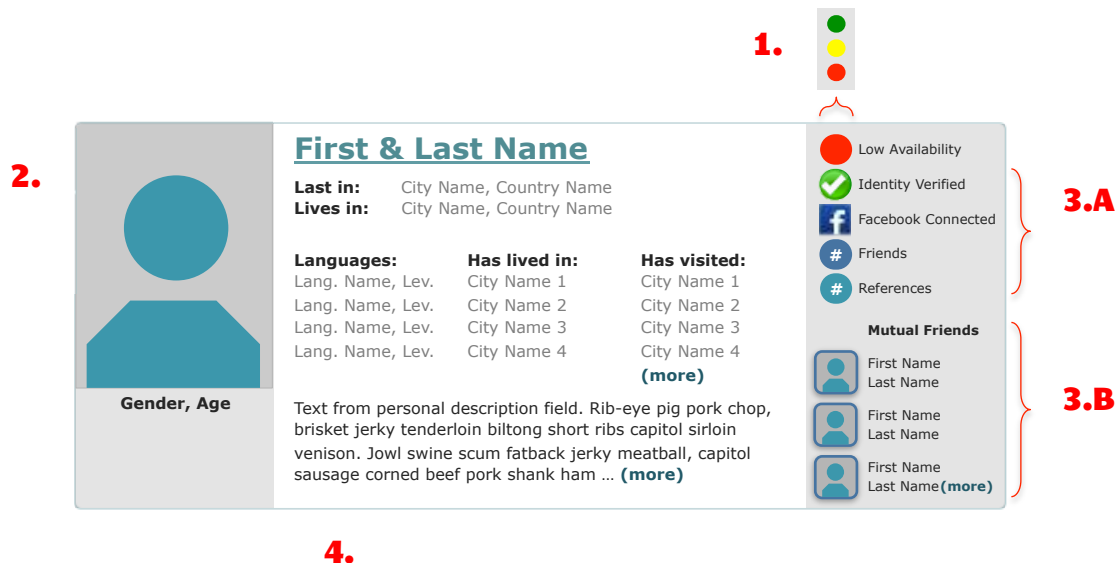

- Reduce text to the most relevant personality info
- Add shared travel & living experiences – these are an easy measure of compatibility for members

# Best UX for Scanning & Selecting

Eye movement visualized

# New micro-profile Design

## 1. Availability

- Now indicated with icon (high, medium, or low)
- Tool-tip explains how availability is calculated

## 2. Identity

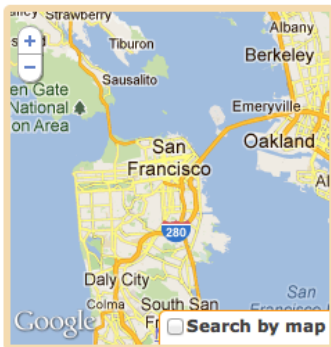

- Gender & Age under photo
- Hovering over photo reveals additional photos

## 3. Reputation

- A. Objective info
  - If verified and FB connected, icons are shown
  - Friends & references count inside of bubble
- B. Subjective info
  - Section appears only mutual friends exist

## 4. Personality

- Simplified to just languages, travels, and description
